

AUTOMATE

AI and automation that handle the repeat work.

Voice agents, document intake, knowledge assistants and connected workflows that act inside your business systems.

Your team should spend its time on the exceptions and decisions that need a person. We build AI agents and workflow automation for the rest: answering enquiries, extracting documents, updating records, preparing reports and routing work to the right owner.

What we build

Voice and chat agents that answer, qualify, book and write outcomes back to the CRM Document intake that extracts, classifies and routes incoming information Knowledge assistants using your own documents, with citations and access controls CRM, accounting, reporting and fulfilment workflows with monitoring and escalation

How the work is measured

Hours a week returned to the team / Cost per processed item / Cycle time from request to done, and the error rate along the way

Free first step: Automation Map

Send the job posting you are about to publish. Every task in it comes back sorted into three columns: software can do this, a person has to, not worth touching either way. About twenty minutes of our time, no call attached.
